# **User Manual**

# Introduction

A heat press machine is using temperature and pressure with a certain amount of time to transfer images on items, the transfer is permanently embedded into the product.

# **Package Contents**

1 × Heat Press Machine

1 × User Manual

# **Product Structure**

1. Power Switch	4. Cap of air regulator	
2. LCD Controller	5. Emergency button	
3. Air regulator	6. Start button	
7. Heating Plate	8. Slide bottom Teflon sheet	

# 1. Printing Methods

- Make sure the power plug is well connected to the air switch, then press the power switch to turn on.
- 2. Hook up to air compressor, adjust the air regulator to 0.4-0.6 Mpa.(Pull up the cap of regulator before adjusting, press down the cap after finish adjusting)
- 3. Set the temperature and the time you want (See the temp&time setting sheet)
- 4. When the temperature reaches the setting temperature, place the object (e.g T-shirt) on press bed, and let the transfer paper upon the object.
- 5. Pull in the bottom sheet, press the start button, and starts to transfer.
- When the scheduled time is up, the heating plate will lift up automatically, the transfer work is finished.
- If meet some emergent situation, press the emergency button, the plate will lift up immediately.

# 2.Recommended Setting for the Object

SURFACE	PRESS TIME	TEMPERATURE	PRESSURE	TIPS	
Fiber/Fabric/Polyster material	35-40 seconds	180°C(400 F)	40 PSI (Medium)	With sublimation paper	
Pure cotton material	20-25 seconds	165°C-170°C	40 PSI (Medium)	With transfer paper	
Mouse pad	25-30 seconds	180°C(400 F)	40 PSI (Medium)	With sublimation paper	
Metal card /Aluminium card	20-25 seconds	180°C(400 F)	40 PSI (Medium)	With sublimation paper	

# These are approximate datas FYI

# 3. Maintain Note:

- Different item will require different temperature and time setting because the materials or thickness is different.
- 2. This machine is not suitable for children to use or for food processing.
- 3. Please turn off the machine and unplug the power cord when the machine is not in use.
- 4. The heat plate will automatically cool down to the room temperature if the heat press stays non-use for more than 30 minutes.
- The heat-releasing fan will automatically starts when the temperature of heat plate reaches 80 °C (176 °F). It helps to reduce the temperature of electrical parts and prolong the service life of them

# 4. Troubleshooting:

#### No action after turn on the machine.

- 1. Check the plug whether it connects well or whether it is broken.
- 2. Check the fuse whether it has been burnt out.
- 3. Check the power switch or digital controller whether it is broken.

## Indicating light is on but the display screen is black.

Check the 5 cable of railway transformer. The connection is poor if it is loose, just fix it. The transformer may be faulty if the cable is well connected just fix it.

### The display screen is working well but the temperature is not heating up.

- Check if the indicating light of solid-state relay is on, if not, please check whether the relay
  or digital controller is broken.
- The heat platen still can't heating up if you already changed the new solid-state relay, please check whether the heat plate is faulty or the heat plate's power cable is loose, if so,it will need to change a new heatplate.

# The temperature is out of control: Set temperature $180^{\circ}C(356^{\circ}F)$ , but the actual temperature is above $200^{\circ}C(392^{\circ}F)$

- 1. It means the solid-state relay is broken, out of control, need to change a new relay.
- 2. Or the digital controller is faulty, need to change controller.

# The print color is pale or faded image

The pressure is not high enough or The temperature is too low / pressing time is too short. Please adjust the pressure/ temperature or increase the heating time.

# The print color is too Darkened, deep or blurred image

The temperature is too high / or pressing time is too long. Please adjust the temperature or reduce the heating time.

#### The print color is different/ partial transfer effect is not good enough

Pressing time is too short/ using poor quality transfer paper.

Please increase the heating time or use high quality transfer paper.

### The transfer paper stick to the object after transfer

The temperature is too high / use poor quality printing transfer paper Please adjust the temperature or use high quality transfer paper.
